Announcing the Release of APL64

It's Here!

APL2000 is excited to announce the first production release of APL64 2022.0.1 on August 11, 2022. APL2000 is moving APL forward with APL64, our newest product, developed for the 64-bit environment and designed to simplify the transition for APL+Win users. Take advantage of the new features in this next- generation APL development platform to enhance your development experience.

There are Many Substantial Advantages to APL64 Including:

- Excellent Compatibility With APL+Win
- Increased Workspace Size Up To Available Workstation Memory
- Increased Variable Size
- Performance Optimization of APL Primitives and System Functions
- Unified Variable Editor To Review and Edit Simple, Homogeneous, Heterogeneous, and Nested Variables
- Full Unicode Support
- Multiple Formats to Display the History in the Developer Version
- Floating or Docked Panes – History, Function and Variable Editor, Debugger
- Multi-Row Executable APL Statements Can Be Executed As A Whole
- Runtime Deployment Simplified – APL64 Application in a Single File
- Context-Sensitive APL Documentation
- Optional Tooltips for Toolbars, Menus and Panes
- New APL String Data Type Supported
- New User-defined Tools Features
- New Configure Host Error Mappings Dialog
- Enhanced Find/Replace Dialog
