This document contains important information pertaining to APL+Win 12 (11.6.01) Beta Release. This beta will run for 15 days after it's first run.

Supported Operating Systems:

Windows XP  
Windows Vista  
Windows 7

Installation:

Unzip the file into the same folder with your current APL+Win v11 system and make a copy of your aplw.ini file and rename it to aplw\_v12Beta-1.ini.

Enhancements:

- Interpreter: The ?DR system function options 'wrap1' and 'unwrap1' now supports ?MOM (<<<Object Reference>>>) and ?UCS (<<<UCS Characters>>>) data types.

Bug Corrections:

- Session: Long statement lines containing numerous color changes had syntax coloring errors mid-way through the lines.
- Interpreter: Some floating points numbers appeared as stars in the session with print precision set to 16 and greater.
- APL GUI: The Combo Box control didn't appear grayed when disabled.
