The APL+Win v14.0.03 release is available and recommended for all current APL+Win subscribers. To obtain this release, visit <http://www.apl2000.com/software.php> and click "APL+Win v14.0.03 Update" or "APL+Win v14.0.03 installer".

The APL+Win 14.0.03 includes the following fixes:

- New]PCFREAD User Command

The]PCFREAD user command reads components from an APL+PC .ASF component file. For the complete user command options, execute

```
]PCFREAD ?
```

- The maximum number of lines retained in the session manager window has increased to 32767 lines from 8000 lines.
- The Inline Control Sequences are enabled in the development and runtime systems without the startup APLW.INI entries.
- Empty prototypes are now supported in the □DTR system function.
- BUGFIX: Version 14.0.02 took much longer than normal to read very deeply nested arrays from APL component files.
- BUGFIX: The error message, "CSE ERROR: The parameter is incorrect", was reported when passing a VT_I1 (1-byte integer) variant type array from CSE for APL+Win to APL+Win.
